Audio Streaming  
Microphone un/mute  
Screenshots

# Global 🥬 Hyper key

Hyper Key is declared as variable in Karabiner.

- This means that does not create an event in the system or in Karabiner EventViewer.

The event is created only when you finish the action.

There are different types of events that can be triggered:

- a) HYPER + 1 → Create an event to the system of pressing x keys.
- b) HYPER + M → Send a shell command to open Activity Monitor
- c) HYPER + Z + M → Send a shell command to trigger an Script that un/mute the microphone

## Spinach Credits

Thanks to mxstbr for inspire me and be the base of the project  
<https://github.com/mxstbr/karabiner>

I tried to use free licenses for everything, I hope didnt miss anything.  
However this Spinach was to lovely. Thanks to Good Ware for it.

Thanks to my new K11 coming soon. I wanted to build a Corne,  
but too many things to do, and this one looks amazing.
